

Realistic, Risk-Free Training

What is the DTS?

The Driver Training Simulator (DTS) is a uniquely immersive experience that allows drivers to safely navigate challenging conditions before hitting the road. The training can address general safety or scenarios tailored to what they are most likely to encounter on a daily basis. This training can help reduce accidents by allowing drivers to practice their decisions and reactions in a realistic, risk-free environment.

What is the training like?

The DTS is housed in a mobile trailer which will be brought to your location as part of the service. Our DTS specialist will then supervise the training of two participants that can be trained simultaneously in 60-minute increments. The training can address the standard critical driving skills or targeted to address specific issues within your fleet.

What does the training cost?

The DTS is available to members at no additional cost.

Simulator Features

- Three 55" Wide Aspect LED LCD Monitors
 - High Resolution (1920 x 1080)
 - 180-Degree Field of Vision
- Motion-Base Seat: Designed to make participants feel as if they are in an actual vehicle.
- Accommodates up to two trainees per 60 minute session, or up to 16 drivers per day.

Simulator Scenarios
